

Using APEX-10 on Sod Farms

Benefits- Things you can expect to see:

- **OMRI Listed Organic**
- APEX-10 can be tank mixed with any other component of program
- Enhancement of fertilizer applications
- Reduction in irrigation by at least 30%
- Increased drought and stress tolerance
- Increase in root mass
- Enhanced seed establishment
- Reduction in overall sod cycle
- Harvest stronger, more mature sod sooner
- Successfully plant in weaker soil
- Harvesting sod sooner saves you time and money
- Increased plant metabolism helps sprigs fill in sooner

Rates and Timing:

COOL SEASON SOD: Apply 3oz/1000 sq ft at planting (1 gallon / acre). Apply 3oz/1000 sq ft in Spring when soil temperatures reach 50 degrees.

WARM SEASON SOD: Apply 3oz/1000 sq ft (1 gallon / acre) when new growth has emerged or sprigs have shown consistent growth. Apply 3oz/1000 sq ft 30 days later.
